

BA004 – Testing for Business Analysts (3 Days)

Software systems that fail to provide full functionality, performance or otherwise do not meet user needs can reduce profit, productivity and result in costly rework. Optimizing Software Quality Assurance practices results in cost-effective and high-quality software. This course provides the necessary skills to define, design and implement a software quality system using proven techniques tailored for your life cycle model.

Target Participant:

Software professionals, business analysts and others involved with developing, testing, maintaining or managing the development of software products.

Prerequisites

- Good knowledge of Relational Database, MS Office, MS Visio (UML Tool)
 - Participant must have a Laptop for group work exercises.
-
