

BSA003 – Object Oriented Analysis and Design Using UML (5 Days)

Object-oriented (OO) analysis and design is the principal industry-proven method for developing reliable, modular, testable programs and systems. This course provides practical skills in the latest OO requirements gathering, analysis, design, and testing methods. Intensive hands-on exercises offer you a working knowledge that turns concepts into practice.

Target Participant:

- Business analysts
- Data analysts
- Process analysts
- Database administrators
- Application designers

Prerequisites

- Have practical professional experience in all of topics covered in the BA001 course, including Requirements Management.
-
